

## NON-WOVEN GEOTEXTILES

### Product information

GEO PP and TEX PP are the nonwoven geotextiles of GEO&TEX2000, made of high tenacity virgin PP, resistant to UV and free from adhesives and resins. Manufactured with the most recent technologies through the process of carding, needle punching and calendering, they reach the high levels of performance required by geotechnical and civil engineering works, combining the functions of filtration, separation, protection, drainage and reinforcement.

They contribute significantly to the long life of the work, and generate a reduction in costs and the environmental impact through a reduced and more efficient use of the materials involved. Available in weights from 65 to 1550 g/m<sup>2</sup>.

Since its foundation, Geo&Tex 2000 Spa, located in the North-east of Italy, invested in innovative technologies and quality products becoming in a short time one of the most important players in the geotextiles market. Passion and ambition enable GEO&TEX2000 to grow continuously in co-operation with customers and suppliers.

### Detailed information

Registration number: S-P-08073  
Status: **Valid**  
PCR: 2019:14  
En15804 Compliant: Yes  
Registration date: January 2, 2023  
Valid until: December 19, 2027  
Geographical scopes: Global

### Company information
